Name list-components– lists deployed components

Synopsis list-components
[--help]
[--type {application|connector|ejb|jruby|web|webservice}]
[*target*]

Description The list-components subcommand lists all deployed Java EE components. If the --type option is not specified, all components are listed. The possible types are as follows:

- application (default)
- connector
- ejb
- jruby
- web
- webservice

This subcommand is supported in remote mode only.

Options --help
Displays the help text for the subcommand.

--type
Specifies the type of the components that are to be listed. The options are as follows:

- application (default)
- connector
- ejb
- jruby
- web
- webservice

If no type is specified, all components are listed.

Operands *target*
Do not specify this option. This option is retained for compatibility with other releases. If you specify this option, a syntax error does not occur. Instead, the subcommand runs successfully and the option is silently ignored.

Examples EXAMPLE 1 Listing Components

This example lists the connector components.

asadmin> **list-components --type connector**
cciblackbox-tx *connector-module*
Command list-components executed successfully

Note: cciblackbox-tx.rar was deployed.

Exit Status 0   subcommand executed successfully

                1   error in executing the subcommand
