**Name** list-sub-components– lists EJBs or Servlets in deployed module or module of deployed application

**Synopsis** list-sub-components
[--help]
[--type {ejbs|servlets}]
[--appname *appname*] *modulename*

**Description** The list-sub-commands subcommand lists EJBs or servlets in a deployed module or in a module of a deployed application. If a module is not specified, all modules are listed. The --appname option functions only when the specified module is standalone. To display a specific module in an application, you must specify the module name with the --appname option.

This subcommand is supported in remote mode only.

**Options** --help
Displays the help text for the subcommand.

--type
Specifies the type of component to be listed. The options are ejbs and servlets. If nothing is specified, then all of the components are listed.

--appname
Identifies the name of the application. This option is required when the desired output is the subcomponents of an embedded module of a deployed application.

**Operands** -modulename
Specifies the name of the module containing the subcomponent.

**Examples** EXAMPLE 1 Listing Subcomponents

This example lists the subcomponents of the MEjbApp application within the mejb.jar module.

asadmin> **list-sub-components --appname MEjbApp mejb.jar**
MEJBBean <StatelessSessionBean>
Command list-sub-components executed successfully.

**Exit Status** 0                              subcommand executed successfully

1                              error in executing the subcommand
