

Name list-domains– lists the domains in the specified directory

Synopsis list-domains [--help] [--domaindir *domains*]

Description The list-domains subcommand lists the domains in the specified domains directory. If the domains directory is not specified, the domains in the default *as-install/domains* directory are listed. If there is more than one domains directory, the --domaindir option must be specified. The status of each domain is listed.

This subcommand is supported in local mode only.

Options --help

-?

Displays the help text for the subcommand.

--domaindir

The directory where the domains are to be listed. If specified, the path must be accessible in the file stem. If not specified, the domains in the default *as-install/domains* directory are listed.

Examples EXAMPLE 1 Listing Domains

This example lists the domains in the *install-dir/domains* directory.

```
asadmin> list-domains
domain1 running
sampleDomain not running
