

Name list-resource-adapter-configs– lists the names of the current resource adapter configurations

Synopsis list-resource-adapter-configs [--help] [--raname *connector-module-name*]

Description This command lists the configuration information in the `domain.xml` for the connector module. It lists an entry called `resource-adapter-config` in the `domain.xml` file. If the `--raname` option is specified, only the resource adapter configurations for the specified connector module are listed.

This command is supported in remote mode only.

Options --help

-?

Displays the help text for the subcommand.

--raname

This option specifies the connector module name.

Operands *target*

This operand is deprecated.
